

The specific aims of the CAN methods course are to enable participants to:

1. Identify the particular needs of the OVC concerned and assess the difficulties in meeting these needs,
2. Consider the range of methods which have been successfully used elsewhere in similar challenging circumstances,
3. Select from these methods those that would be most relevant to their particular circumstances, and hence most helpful in enabling good community supported family care of the particular children in need,
4. Make plans for the tailoring of these ideas for the benefit of the children concerned and for their subsequent implementation.
